Towhid Ahmed

Skill : Generative AI Engineer | Agentic AI & LLMOps | Advanced RAG Systems | LLM Applications | Open to Remote Opportunities
Chattogram, Bangladesh

Summary

I'm Towhid Ahmed, AI Engineer with 1+ year of hands-on freelance experience building production LLM applications for clients. I architect multi-agent systems with LangChain and LangGraph, design retrieval-augmented generation (RAG) pipelines with vector databases and cross-encoder re-ranking, and build LLMOps infrastructure for observability and reliability. 7+ projects deployed to production. Technical depth: Advanced RAG architectures, agentic orchestration, production-grade safety guardrails, semantic search optimization. Real-world impact: 35% hallucination reduction, 25% relevance improvement, 98% test coverage across deployments. Beyond AI: 400+ DSA problems solved (CS fundamentals matter for production systems). I'm drawn to work that combines technical depth with tangible impact—building scalable AI products that solve real problems. Currently seeking remote roles at US/EU tech companies and AI startups. Experience

Freelancer

1 year 3 months

Freelancer Generative AI Engineer

June 2025 - Present (1 year 3 months)

Generative AI Engineer with 1+ year of freelance experience designing and deploying production-grade LLM applications, multi-agent AI systems, and Retrieval-Augmented Generation (RAG) solutions for diverse client requirements.

Freelance Generative AI Engineer | Agentic AI

June 2026 - July 2026 (2 months)

AI Document Assistant | June 2026 – July 2026

- Enhanced information reliability and user trust by developing a 3-agent LangGraph workflow with citation-based RAG, significantly reducing AI hallucinations.
- Powered seamless document processing and interaction by engineering 7 production-ready REST APIs using FastAPI, GPT-4 Turbo, and Pinecone.
- Enabled 1,000+ document knowledge-base updates without redeployment.

Generative AI Engineer

August 2025 - September 2025 (2 months)

AI Sales & Customer Support Assistant | Aug 2025 – Sep 2025

- Automated customer interactions and improved consistency using a multi-agent LangGraph pipeline (Intent, Retrieval, Response) with Pinecone RAG and conversational memory.
- Slashed AI inference costs and maintained high execution speed by integrating Groq, Hugging Face embeddings, and Pinecone Serverless.
- Built a scalable support infrastructure with a Streamlit UI and a FastAPI backend featuring 6+ REST APIs for knowledge uploads and session management.

Self-Employed

Generative AI Engineer

June 2025 - Present (1 year 3 months)

AI Document Assistant | Jun 2026 – Jul 2026

- Enhanced information reliability and user trust by developing a 3-agent LangGraph workflow with citation-based RAG, significantly reducing AI hallucinations.
- Powered seamless document processing and interaction by engineering 7 production-ready REST APIs using FastAPI, OpenAI API, and Pinecone.
- Enabled 1,000+ document knowledge-base updates without redeployment.

AI Sales & Customer Support Assistant | Aug 2025 – Sep 2025

- Automated customer interactions and improved consistency using a multi-agent LangGraph pipeline (Intent, Retrieval, Response) with Pinecone RAG and conversational memory.
- Slashed AI inference costs and maintained high execution speed by integrating Groq, Hugging Face embeddings, and Pinecone Serverless.

- Built a scalable support infrastructure with a Streamlit UI and a FastAPI backend featuring 6+ REST APIs for knowledge uploads and session management.

Education

Chittagong University of Engineering & Technology

Computer Science and Engineering(CSE), Generative AI Engineer · (July 2023 - June 2027)
